## SCIENTIFIC RESEARCH

---

**Prioritizing *TESS* Targets for Atmospheric Characterization** 2019 - present  
A prioritization scheme to systematically search for the *TESS* targets that are best-suited for atmospheric follow-up with *JWST*.

**The *TESS*-Keck Survey** 2019 - present  
Observing and analysis support for the *TESS*-Keck Survey, a multi-institution collaboration with the goal of measuring the orbits and masses of 100 *TESS* planets with Keck-HIRES.

**Unveiling the Spectra of Young Stars with Gaussian Processes** 2017 - 2019  
Using Gaussian processes to model time-series spectroscopic observations of a young star, LkCa 15, we disentangle the stellar atmosphere from the spectrum of accretion, revealing time-variable, line-specific emission related to the infalling material.
