SCIENTIFIC RESEARCH

Prioritizing TESS Targets for Atmospheric Characterization

2019 - present

A prioritization scheme to systematically search for the TESS targets that are best-suited for atmospheric follow-up with *JWST*.

The TESS-Keck Survey

2019 - present

Observing and analysis support for the TESS-Keck Survey, a multi-institution collaboration with the goal of measuring the orbits and masses of 100 TESS planets with Keck-HIRES.

Unveiling the Spectra of Young Stars with Gaussian Processes

2017 - 2019

Using Gaussian processes to model time-series spectroscopic observations of a young star, LkCa 15, we disentangle the stellar atmosphere from the spectrum of accretion, revealing time-variable, line-specific emission related to the infalling material.
